Summary

A Software Engineer is a professional who designs, develops, tests, and maintains software applications and systems. They apply engineering principles and programming languages to build efficient and scalable solutions. Software Engineers collaborate with cross-functional teams, solve technical problems, and continuously improve software performance and reliability. Their work spans various domains, including web development, mobile applications, embedded systems, and enterprise software.

Education

BVP AKIMS, Solapur, Maharashtra BCA
Pahu Solapur University, MCA

Experience

12+ Years

Skills

- Proficiency in programming languages (e.g.
- Java
- Python
- JavaScript
- C++) Software development lifecycle (SDLC) knowledge Problem-solving and debugging Version control (e.g.
- Git) Familiarity with databases
- APIs
- and cloud platforms
